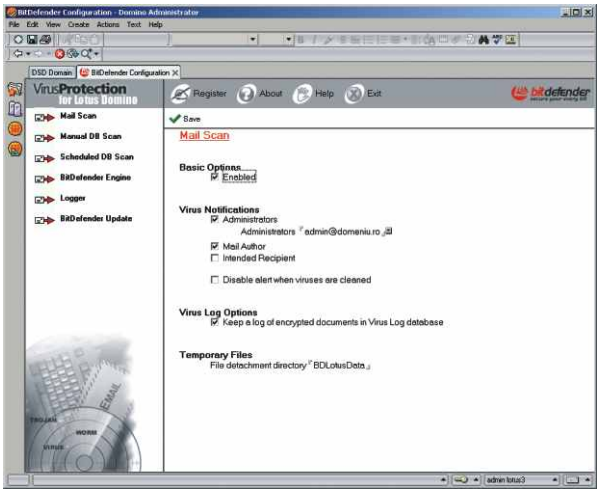
BitDefender for Lotus Domino

Don't let your Dominoes topple!

The very features that make the Lotus Notes environment such a powerful collaboration and information exchange medium are also huge threats to the safety of clients within it. A virus that makes its way into a shared Notes database will be spread simply by users accessing the infected file, in the belief it is legitimate. This makes securing databases and mail exchanges a top priority for a clean Notes environment.



Lotus Domino admin interface

BitDefender v1.6 for Lotus Domino is a state-of the art antivirus scanner, incorporating the award-winning technologies found in every BitDefender product. Real-time e-mail scanning and on-demand databases scanning capabilities combine to create a virus-free Lotus environment.

BitDefender for Lotus Domino is native to the Notes environment. It is integrated directly with the core Lotus Notes document engine, providing a graphical user interface (GUI) that is intuitive and easy to use. The application was released in two separate versions, one supporting Lotus Domino 5.06 and higher (up to and including the **new 6.x** generation) and one for the legacy Lotus Domino 5.0 to 5.0.5.

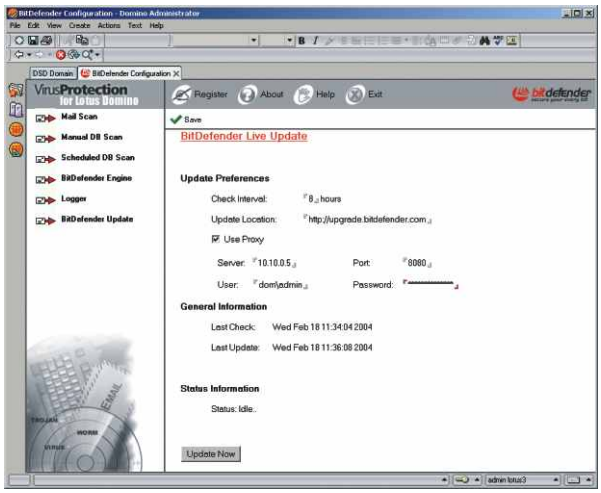
Key Features

Real-Time Antivirus Protection
Real time scanning and cleaning of Lotus Domino e-mail traffic without slowing down mail delivery. Blocks infected objects regardless of format, archive or compression type.

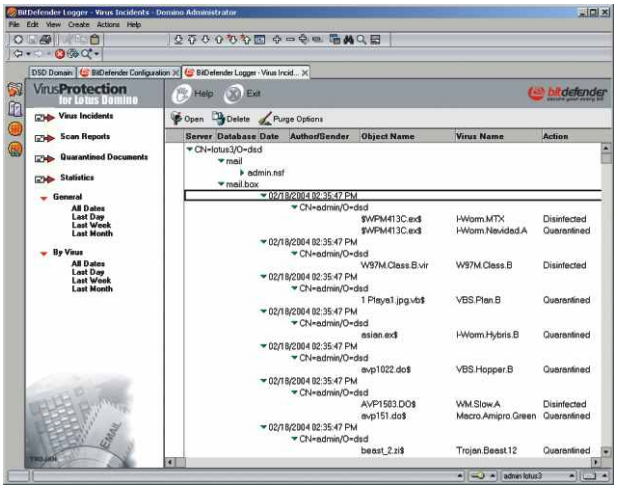
Lotus Database Scanning
On-demand scanning ensures that databases are virus-free on setup. Fully configurable scheduled database scanning offers an additional layer of protection.

Advanced Engines
BitDefender for Lotus Domino ensures 100% detection rate for all viruses in the wild (ITW) through its powerful scanning engines from BitDefender 8 Professional Plus, certified by ICSA Labs, CheckMark, CheckVir, TÜV and Virus Bulletin.



Lotus Domino admin interface

System requirements:
- Lotus Domino versions 5.x and 6.x
  Microsoft Windows 2000 server,
  or Microsoft Windows NT 4.0 with SP 3 or later.
- 128 MB RAM (256MB recommended)
- 20MB available disk space for program files
- 100MB disk space for swap files (500MB recommended)
- Internet access (for Update Module)



Lotus Domino admin interface

Intelligent Update
Enables automatic updates of virus definitions, without user intervention, directly from the BitDefender servers or from approved mirror sites. Thus, the product is kept up-to-date, ensuring a swift and effective reaction.

Optimized E-mail Scanning
E-mail messages with multiple recipients are filtered only once, before delivery, not once for every recipient.

Extended Protection
Antivirus protection for new mail boxes - scheduled tasks will modify automatically to include new users.

Quarantine for Infected or Suspicious Files
Infected or suspicious files are isolated in the quarantine zone, preventing network infection. IT managers can investigate the quarantined files at any time or send them to be analyzed by the BitDefender Labs.

E-mail Alerts
When a virus is discovered, BitDefender for Lotus Domino can automatically alert, via email, the people you designate - for example, the Notes administrator or other individuals who need to know when infected files are found, the sender, and/or the recipient(s).

Detailed Reports and Statistics
BitDefender for Lotus Domino provides the administrator with scan reports and stats by number of infected objects, by time or by virus name.

BitDefender for Lotus Domino can be downloaded for evaluation from www.bitdefender.com the SOFTWIN corporate website dedicated to data security.
